## Wooden support 2004

### Care & Maintenance

Scuff marks may be removed with a damp cloth. Occasional use of furniture polish will maintain the good looks of your cot.

For safety, please remember...

Periodically check all screw attachments to make sure they remain tight. A loose screw could injure a child or become a hook for necklaces causing a risk of strangulation. Do not attach any toy or decoration to the inside of the cot which could provide a foothold for your child to climb out. The safety of the cot could be adversely affected by using flammable bedding. The cot should not be used if any parts are lost or damaged.

Be aware of the risk of open fire and other sources of high heat, such as electric bar fires, gas fires, etc, in the vicinity of the cot.

The assembly of this Pali crib is quite easy, but we still recommend that you follow the instructions closely to avoid any problems.

### PARTS LIST

2 end sides (left + right)

1 side panel

1 front side

1 back side

1 mattress base

2 plastic covers

6 bolts 6x35

8 bolts 6x30 black

6 wooden pegs

2 screws TN 6x50

4 curved fastener plates

4 bolts 6x30 brass

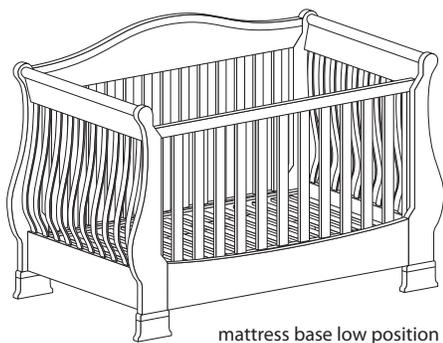

4 bolts 6x65 brass

4 plastic washers

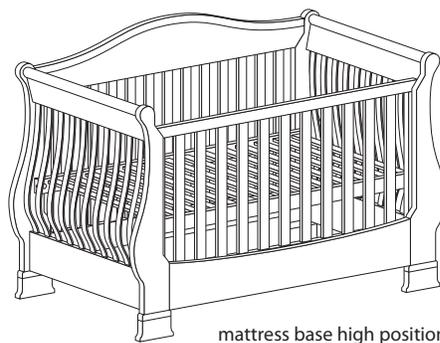

4 plastic supports

1 allen wrench

1 wrench for TN 6x50 screws

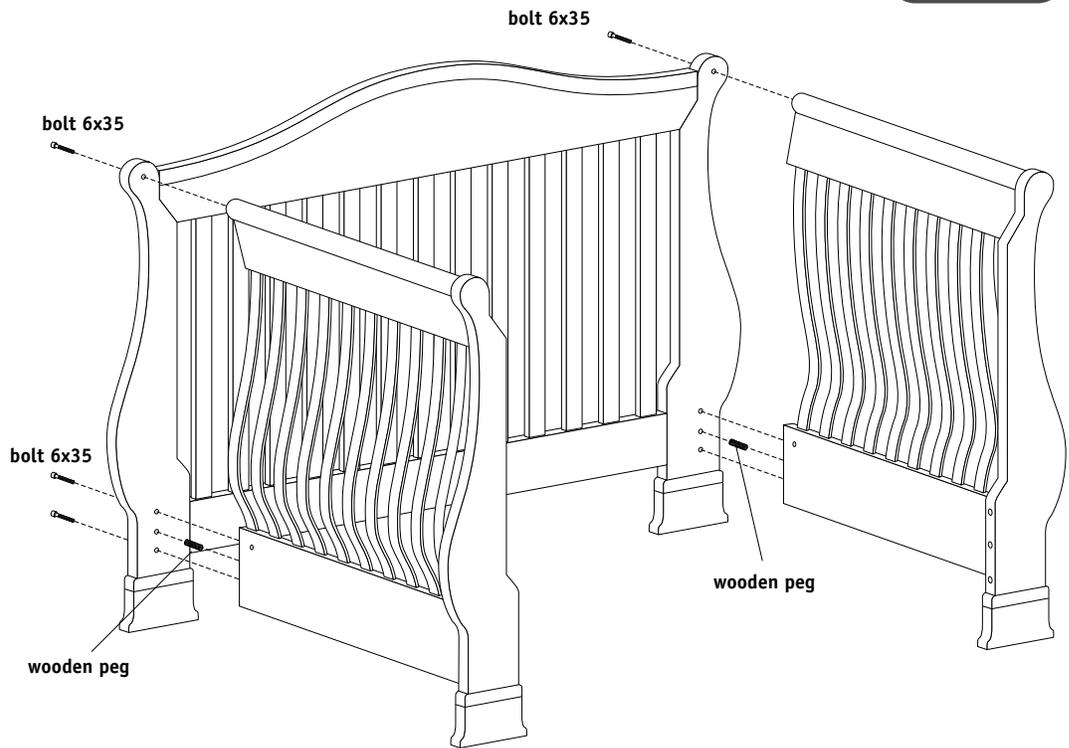

AS SOON AS BABY STARTS TO SIT UP YOU MUST USE THE LOWEST MATTRESS BASE POSITION. To assemble the cot with the mattress base at HIGH position see step 5.

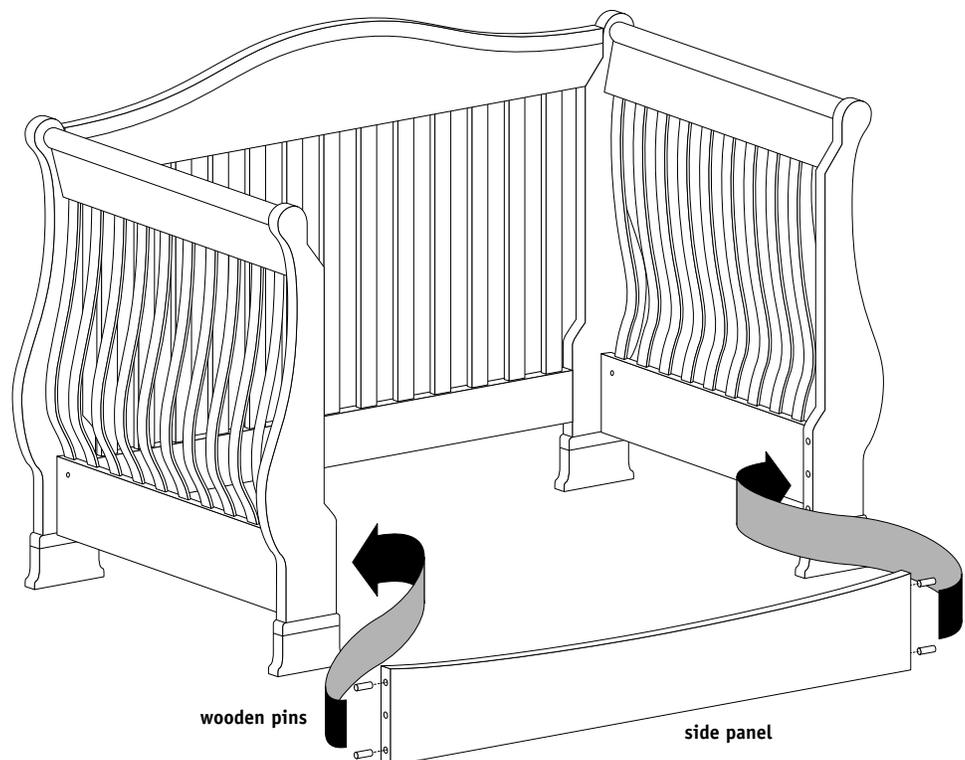

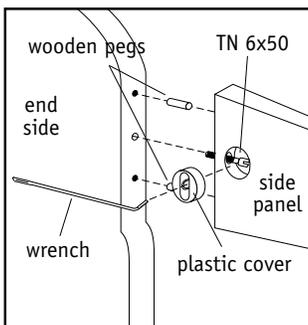

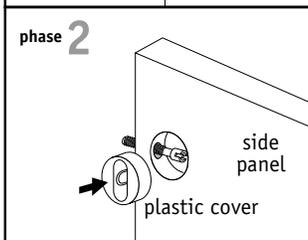

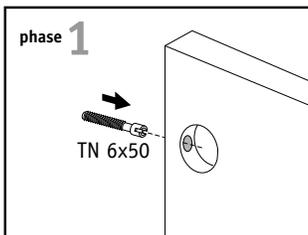

# STEP 1

Before assembling the crib, we recommend that, using the small allen wrench, you **LOOSEN** the screws which fasten each crib end side to the back side; it will then be easier to insert the mattress base and the side panel.

Leave all other screws slightly loosened while you assemble the crib; tighten them totally when finished.

# STEP 2

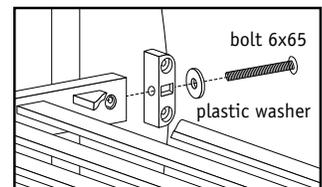

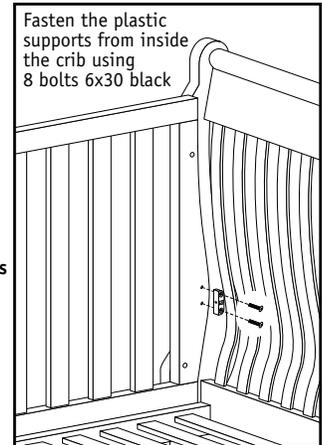

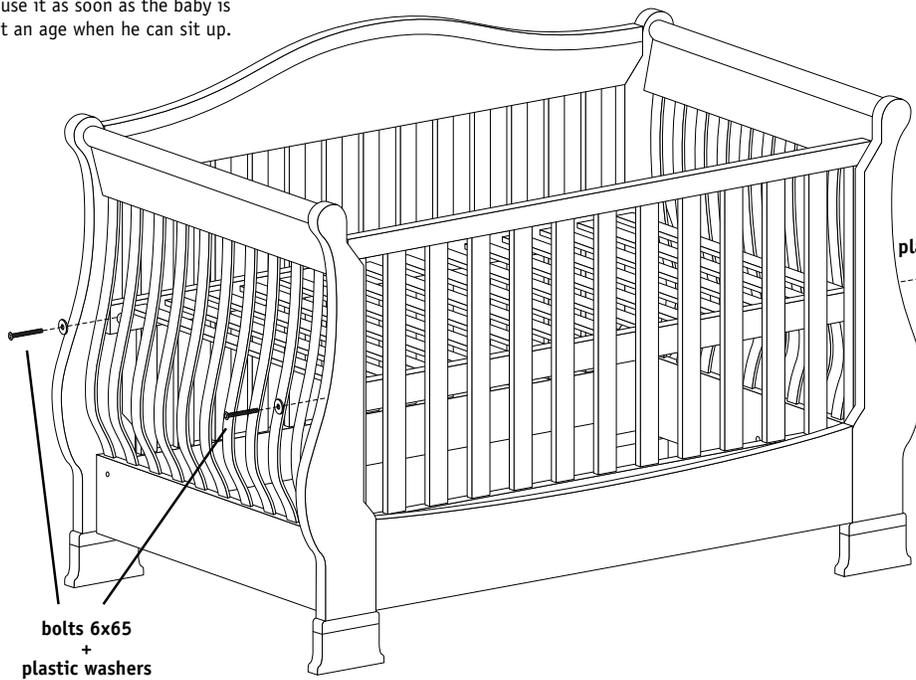

# STEP 5

## Mattress base - High position

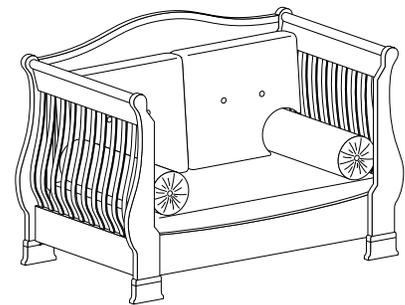

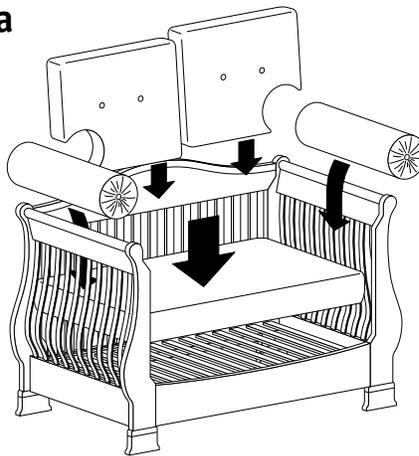

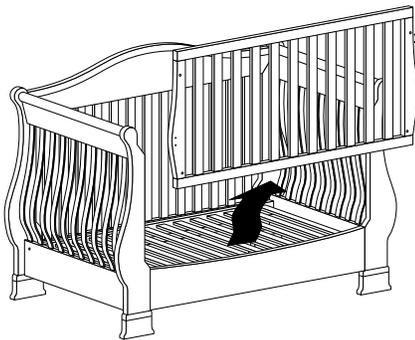

Since the lowest position of the base is the safest, use it as soon as the baby is at an age when he can sit up.

# STEP 6

## Converting the crib to a sofa

Remove the front side
